DETAILED ACTION

The disclosure is objected to because of the following informalities: The Abstract should not contain the term "said".

Appropriate correction is required.

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is not clear as to what method steps are being positively claimed. In particular, it is not clear whether the carrier film or foil in the last four lines of claim 1 is being positively claimed, or not, and whether the "functions to draw" limitation in the last three lines is being positively claimed as a method step. That is, is the film or foil being claimed as absorbing the destructive agent from the valuable documents? This is currently regarded by the examiner as being only inferentially claimed. Also, in claims 1 and 6, it is not clear whether an alarm is being positively claimed, or not. In claim 6, lines 1-2, "relating to" is not clear as to whether the storage space is being positively or only inferentially claimed. Claim 6 is also not clear as to whether the valuable documents are being positively claimed. In claim 8, line 2, "claims" should read --claim--. Regarding claims 10, 11 and 14-20, the phrase "or/and like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

It is also noted that claims 10, 11 and 14-20 alternatively use "or like" and "and like", and it is not clear whether one or all of the listed machines are being referred to.

In view of the above rejections, the claims are rejected as best understood, on prior art, as follows.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-20 as best understood are rejected under 35 U.S.C. 102(e) as being anticipated by Lundblad (186).

Lundblad teaches both an arrangement and a method of use of the arrangement in a depositing machine, including a storage space 101 having storing devices 11-17 for storing valuable documents on a drum 30, each drum is arranged in a collecting vessel 11-17, which receives the destructive agent when it is released, a destructive agent container 31 or 32 and the documents are wound on the drum with the aid of a carrier film or foil defined by the belts of column 2, line 14. With respect to claims 4 and 9, the fuses 3113 and 3213 in fig. 3 define a puncturing means for the nets 3112 and 3212 of the casings 31, 32. With respect to claim 3, at least one of the containers 31 and 32 in fig. 3 is mounted above the bottom of the collecting vessel 11-17 in which the drum(s)

are mounted. Further, with respect to claims 7 and 12, even if the device of fig. 3 were mounted horizontally within the vessel 11-17, at least a portion of the containers 31, 32 would be above the valuable documents and the bottom and an opening portion of the collecting vessel 11-17. The limitations of claim 5 are disclosed in column 1, lines 58-60 of Lundblad.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Trantham (353) also teaches valuable documents on a drum and a destructive agent mounted thereabove.
